

# Medici Documenter System Requirements

These requirements were established to ensure acceptable performance. If your system does not meet the minimum, further evaluation may be needed to determine what kind of performance can be expected.

These requirements are subject to change without notice. Please visit our support web site at [support.bankerssystems.com](http://support.bankerssystems.com) for updates to these System Requirements.

## APPLICATION / DATABASE SERVER

- **Operating System:** Windows 2000 Server (Windows Server 2003 recommended)
- **Processor:** 1.7 GHz Intel Processor (Dual 2.8 GHz Intel Processors recommended)
- **Memory:** 512 MB or greater (1 GB or greater recommended)
- **Hard Drive:** At least 800 MB available hard disk space (2 GB or greater recommended)
- **CD-ROM Drive:** Needed to install the software
- **Other Required Software:**
  - Microsoft SQL Server 2000 or greater (Microsoft SQL Server 2005 recommended)

## APPLICATION / DATABASE SERVER

- **Operating System:** Windows 2000 Professional (Windows XP Professional recommended)
- **Processor:** Pentium 1.7 GHz (Dual 2.8 GHz Intel Processor recommended)
- **Memory:** 512 MB or greater (1 GB or greater recommended)
- **Hard Drive:** At least 800 MB available hard disk space (2 GB or greater recommended)
- **CD-ROM Drive:** Needed to install the software
- **Other Required Software:**
  - MSDE 2000 or greater

## NETWORK CLIENTS

- **Operating System:** Windows 2000 Professional (Windows XP Professional (recommended)
- **Processor:** 1.0 GHz Intel processor (2.4 GHz Intel Processor recommended)
- **Memory:** 512 MB or greater (1 GB or greater recommended)
- **Hard Drive:** At least 500 MB available hard disk space (1 GB or greater recommended)
- **CD-ROM Drive:** Needed to install the software
- **Display:** 800 X 600 resolution or greater (1024 X 768 resolution recommended)
- **Other Required Software:**
  - Microsoft Word 2000 (Microsoft Word 2003 recommended)
- **Other Optional Software:**
  - Microsoft Excel
  - Microsoft Access
  - Adobe Acrobat Reader
  - Internet Explorer
  -

## NETWORK CONNECTIONS

- **LAN:** 10 Mbps or greater (100 Mbps / full duplex recommended)
  - Setting 10 Mbps or 100 Mbps option as a constant is recommended over using "auto-detect"
- **WAN:** T1 or greater (DS3 switch (~45Mbps) recommended)
  - The bandwidth specifications native architecture operations assume "normal" traffic so actual results will vary based on lenders particular configuration. Microsoft Terminal Server / Citrix implementations only require 25 Kbps per concurrent user

## STAND-ALONE DEPLOYMENT

- **Operating System:** Windows 2000 Professional (Windows XP Professional recommended)
- **Processor:** Pentium 1.7 GHz (Dual 2.8 GHz Intel Processor recommended)
- **Memory:** 512 MB or greater (1 GB or greater recommended)
- **Hard Drive:** At least 800 MB available hard disk space (2 GB or greater recommended)
- **CD-ROM Drive:** Needed to install the software
- **Other Required Software:**
  - MSDE 2000 or greater
  - Microsoft Word 2000 (Word 2003 recommended)
- **Other Optional Software:**
  - Microsoft Excel
  - Microsoft Access
  - Adobe Acrobat Reader
  - Internet Explorer

#### **PRINTERS:**

Printers are required to be PCL-5 or PCL-6 compatible. Printer drivers should be supported by your printer and your operating systems. Printer memory should be appropriate for the dots per inch (DPI) setting you intend to place on your printers and within your printer configurations. Generally, allow 8 MB of RAM for 300 DPI, 16 MB of RAM for 600 DPI, and 32 MB of RAM for 1200 DPI, and so on. Since all documents are created using either the Microsoft Word or Microsoft Excel application, any printer that is compatible with Microsoft Office 2000 or greater products, is acceptable for the production of Medici Documents.

#### **ADDITIONAL NOTES**

**Configuration Options:** Terminal Server/Citrix operating environment and distributed Web-based services are supported.

**Service Packs:** The most current service pack is required for all Microsoft applications.

**Terminal Server / Citrix:** Network client requirements do not apply to Citrix implementations.

**Windows Millennium Edition and Windows XP Home:** These operating systems are designed strictly for home use and are not supported.

**Microsoft Small Business Server and Microsoft BackOffice Server:** These operating systems are designed strictly for small business applications and are not supported.

**Domain Controllers:** Good networking practice dictates that application software should not be installed on a Domain Controller. This is due to security and workload concerns.

**Exchange Server:** Good networking practice dictates that application software should not be installed on a Microsoft Exchange Server. This is due to security and workload concerns.
